

Series A = Doors to 3710mm wide

Series AA = Doors over 3760mm wide

## ROLLER GARAGE DOORS

Henderson roller garage doors are designed to fit behind the brickwork opening and to overlap the brickwork slightly in width. To order the size of your Henderson roller door, follow these 3 steps:

1. The headroom required from the top of the opening to any obstruction or the underside of the ceiling/rafters is 420mm. A headroom as low as 300mm can be used, but the underside of the rolled up door will show when the door is in the open position. Headroom clearance must extend for a minimum of 450mm back from the opening.
2. The door should overlap the opening on each side by: Series A:25mm, Series AA:50mm. Therefore to specify the opening width, state the opening +50mm (Series A) or opening +100mm (Series AA). State the height from inside floor to underside of the brickwork.
3. The minimum sideroom required between the opening and the side wall of the garage at each side is 100mm. For remote controlled doors, add an extra 25mm on each side.
